CHPL | CFBL TECHNOLOGY

Fossil's CHPL (Custom High Pressure Laminate) and CFBL (Custom Fiber Balanced Laminate) are the world's most advanced technologies for creating both indoor and outdoor graphics. At Fossil... we have a solution for your toughest graphic challenges.

Reasons to Choose Fossil

- The most durable graphics made, graffiti proof and guaranteed for 10 years.
- Pedestals, supports and brackets. everything you need for installation.
- Panels can be easily attached to walls, railings and posts without visible hardware.
- Can be made in any shape. Design possibilities include cut-outs within the panel, shaped edges, even 3-D layering.
- Graphics can be created from your digital files, or have our artists create the perfect design for you.
- Stunning image quality with Fossil's exclusive 12-Color HD Printing.
- Available in panel sizes up to 5' x 12', and thicknesses from .028" laminate to 1" solid structural panels.
- Rust free hardware designed to stand the test of time.
- dFBL panels are "Class A" fire rated and can be readily applied to various substrates, including directly on drywall.
- Audio sign technology featuring button, motion or touch sensors.
- Cost effective solutions to your toughest graphic challenges.
- All Fossil CHPL & CFBL products are GREENGUARD® and LEED® certified.
- Manufactured entirely in the U.S.A.

Pelicans and Pesticides Don't Mix
 During the 1950s and '60s, DDT was used to eliminate insect pests. As the pesticide flowed from land to water, fish collected DDT in their tissues. Some birds—like pelicans and bald eagles—ate the fish; DDT passed into their bodies as well.

Damaged by DDT
 Over time, birds affected by DDT laid eggs with shells so thin they were crushed. DDT devastated these tender populations. But in 1972, the US banned DDT. Now, many birds—including pelicans—have recovered.

What may happen in the future? The use of pesticides is increasing every year. What species might a pesticide affect next?

Where Do They Live?

Brown pelicans live mostly in coastal areas. They are found along the Pacific and Atlantic coasts of the United States to northern South America and around the Caribbean islands.

Brown Pelican
Pelecanus occidentalis

The best place to see brown pelicans is in the estuary in this exhibit. Brown pelicans dive into the water from a stunning 80 feet in the air to catch tiny swimming fish under the water's surface.

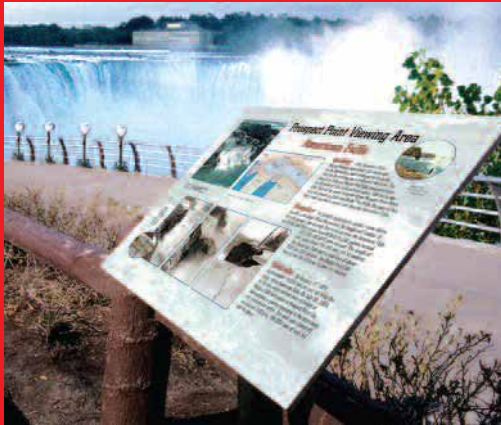

The brown pelicans are off-exhibit for the winter.

How Big Are They?
 Male brown pelicans weigh about eight pounds while females average about seven. What they lack in size they make up for in strength: the birds' wings span about seven feet.

What Do They Eat?
 Brown pelicans eat many fish and small marine animals. They use their gray, felt pouches along with three gallons of seawater. The birds splash the water out and swallow the food inside.

Fossil is the most durable graphic made... guaranteed.

FOSSIL combines the most advanced graphic imaging with the proven durability of High Pressure Laminate. Using extreme heat and pressure, the final product is a permanent fusion of image and HPL that can never delaminate, separate, crack or peel. FOSSIL CHPL signs and murals are graffiti proof, impervious to moisture, and are extremely resistant to UV rays, scratching, impact, and cigarette burns. In fact, they're so durable we guarantee them for 10 full years. Even in the harshest conditions, the original beauty of your FOSSIL graphic will live on.

There's a reason why more parks, museums,
theme parks, zoos and aquariums
choose FOSSIL again and again.
